AN EASY WAY TO REMEMBER TIME PERIODS IN GUAM'S PREHISTORY AND HISTORY

Period	Dates	Length
Prehistoric or Pre-Contact	By at least 1500 BC to AD 1521	More than 3,000 years
Spanish	1521-1898	More than 300 years
First American	1898-1941	
World War II or Japanese	1941-1944	Less than 3 years
Second American	1944-present	

TIMELINE OF THE PREHISTORIC PERIOD

TIMELINES OF THE HISTORIC PERIOD

ADZES

- Adzes are woodworking tools. We don't find the shafts, but we find the blades.
- Most adze blades were made of *hima*, the giant clam, *Tridacna*.
- Some adzes were made of Terebra or Lambis shells.

Typical *Tridacna* adze blade

TEREBRA ADZES

LAMBISADZE (blade end to right)

LAMBIS PROJECTION TOOL

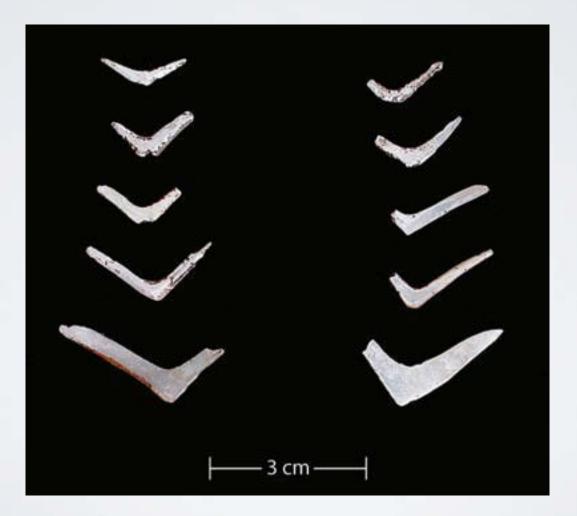

FISHING GEAR

- Fishhooks were made of shell and bone.
- Gorges are two-pronged hooks.
- The fishing line and nets were made of plant materials that do not last.
- Other types of fishing gear include sinkers, harpoons, and chumming devices.

J-SHAPED FISHHOOKS MADE OF ISOGNOMON SHELL

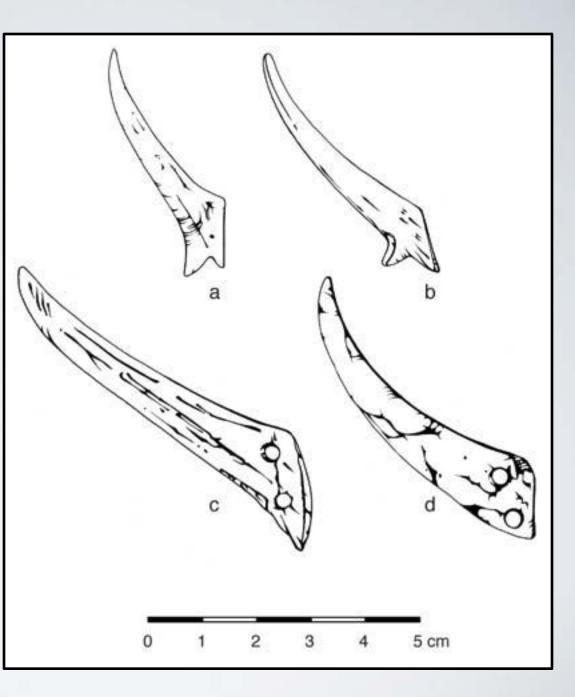

V-SHAPED GORGES MADE OF ISOGNOMON SHELL

Points of composite fishhooks

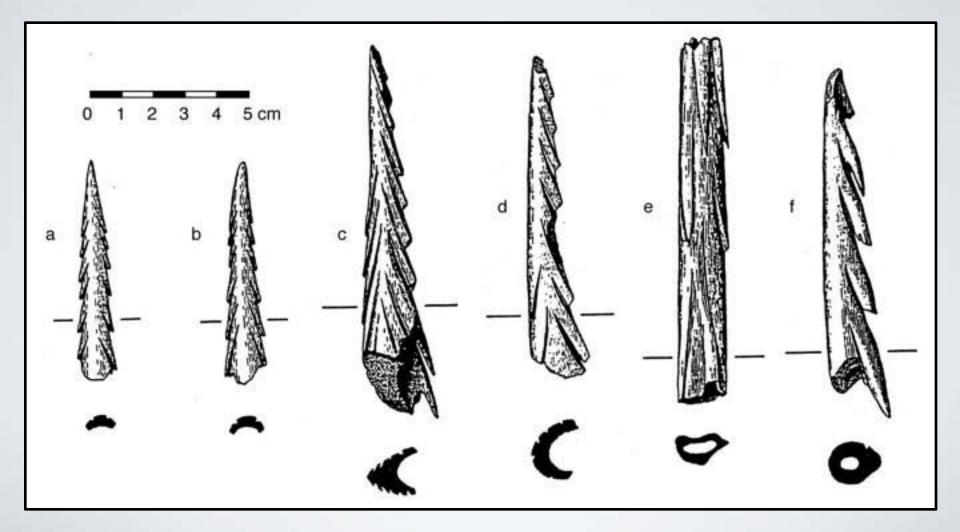

- a, b, and c are made of bone.
- d is made of shell.

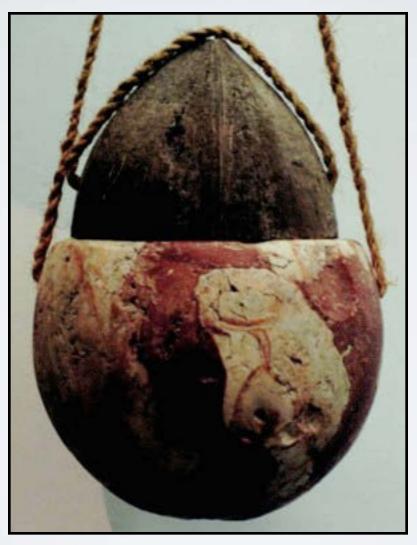

Human bone point of composite fishhook

HARPOON OR SPEAR POINTS MADE OF HUMAN BONE

THE POIO OR FISHING STONE USED TO FISH FOR ACHUMAN

ITEMS OF ADORNMENT

- Items of adornment, such as beads and bracelets, were probably indicators of status or wealth.
- Both men and women wore beads and bracelets, but more women than men did.
- There was a change in the preferred shell during the Prehistoric Period from cone shell to Spondylus.

TYPE I CONUS BEADS (PRE-LATTE)

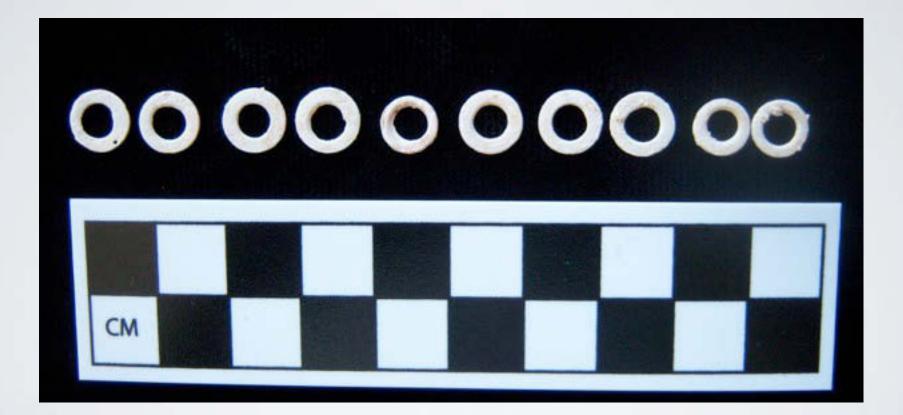

TYPE 2 CONUS BEADS (PRE-LATTE)

TYPE 3 CONUS BEADS (PRE-LATTE)

CYPRAEA BEADS (PRE-LATTE)

SHELL BRACELETS (PRE-LATTE)

SPONDYLUS BEADS (LATTE OR PROTOHISTORIC)

TYPE 4 CONUS BEADS (LATTE)
